

Week 3 · Map It & Give It a Face

Muhrram Ali · AI Fluency

1. One-line claim

I take machine-learning models from notebooks into working pipelines that respect real systems and deployment constraints.

2. Content map

Home

Sections: (1) One-line claim + short support · (2) Strongest case – Cosmic.Ai pipelines · (3) Two supporting cases (YOLO + Task API/Postgres) · (4) Short “how I work” note · (5) Contact/CTA

Primary CTA: Email me to discuss a research or internship opportunity

Work / Cases

Case 1 – Taking models into production pipelines (Cosmic.Ai)

Case 2 – YOLO accuracy-vs-deployment trade-offs

Case 3 – Task API → SQLite → Postgres (same API, real persistence)

Case 4 – Social Media Studio (adapters + real Discord publish)

CTA on every case: Email me / View repo

About — Short bio from the proof statement + background. CTA: Email me.

Contact — Single clear email + GitHub. CTA: Email me to discuss a research opportunity.

Still need to gather

- Clean screenshot of Cosmic.Ai dashboard/pipeline (real capture)
- YOLO detection result images (real outputs)
- Swagger /docs screenshot of Task API (have)
- Discord message published by Social Media Studio (real)
- Optional: terminal capture of docker compose up + persistence proof
- Simple favicon (will create from identity kit)

3. Identity kit

Fonts (Google Fonts)

Heading & Body: **Inter** (400 / 500 / 600 / 700). One family, two main weights. Clean, modern, highly readable.

Palette (hex)

Near-black text: **#1A202C**

Near-white background: **#F7FAFC**

Accent / links: **#2B6CB0**

Muted gray: **#718096**

Only four colors. The work stays the most colorful thing on the page.

Logo / Favicon

Simple monogram **MA** in Inter Bold, white on accent blue (#2B6CB0), rounded square. Favicon is the same mark at 32×32.

Style note

Fonts: Inter only. Headings 600/700, body 400. Colors: text #1A202C, background #F7FAFC, accent #2B6CB0, muted #718096. Mood: calm, technical, confident. Generous whitespace. The design frames the work; it never competes with it. Prefer real screenshots over generated images.

4. Image set & rejection note

Final images that belong

1. Real screenshot of Task API Swagger UI
2. Real Discord message published by Social Media Studio
3. Real YOLO detection output (cropped, clear)
4. Simple MA favicon / logo mark
5. Optional: clean terminal capture of docker compose up

Rejection note

I generated several abstract “AI pipeline / neural network” hero images. They all had the typical soft-glass, glowing-node, over-processed look that currently reads as AI slop. They would have been the most colorful and memorable thing on the page — exactly the opposite of the portfolio rule. I rejected all of them. A quiet heading over whitespace plus real screenshots of the actual systems is stronger and more honest. The work itself should be the visual proof, not a generated illustration of the idea of the work.

This deliverable uses only the real projects and proof statement from Weeks 1–2. Design choices stay minimal so the cases remain the focus.
