

Week 3 · The Through-Line

Muhrram Ali · Content Map & One-Line Claim

1. One-line claim

I take machine-learning models from notebooks into working pipelines that respect real systems and deployment constraints.

This is the single sentence a visitor should remember. It names the skill, the evidence base, and the kind of work I want to be hired for.

2. Content map

Home

Sections (in order)

1. One-line claim + one supporting sentence
2. Strongest case — Cosmic.Ai internship (taking models into production pipelines)
3. Two supporting cases side-by-side — YOLO accuracy-vs-speed trade-offs + Task API (same API, real persistence)
4. Short “how I work” note (systems + ML intersection)
5. Contact block

Primary CTA: Email me to discuss a research or internship opportunity

Secondary CTA: View GitHub repositories

Work / Cases

Sections (in order, strongest first)

1. Case — Taking models into production pipelines (Cosmic.Ai)
2. Case — YOLO: measuring accuracy vs deployment constraints
3. Case — Task API → SQLite → Postgres (identical API, real database)
4. Case — Social Media Studio (platform adapters + real Discord publish)

Each case ends with the same two CTAs: **Email me** · **View repo**

About

Short bio built from the proof statement (3–4 sentences).

Background: final-year Computer Systems Engineering + independent AI systems work.

CTA: Email me

Contact

Single clear email address + GitHub link.

CTA: Email me to discuss a research opportunity or internship

All CTAs ladder up to the single action defined in Week 1: a research lead or PI emails me to discuss an opportunity.

3. Still need to gather

- Clean, cropped screenshot of Cosmic.Ai pipeline or dashboard (real capture)
- YOLO detection result image with visible boxes and scores (real output)
- Swagger UI screenshot of the Task API (already have from local runs)
- Proof that Postgres data survives docker compose down + up (terminal or browser)
- Actual Discord message published by Social Media Studio
- Simple MA favicon (will generate once from the identity kit and lock it)
- Real photo of me for the About page

None of these block the build. The structure and copy can be written now; the missing visuals are concrete and finite.

This map uses only the real work developed in Weeks 1–2. The strongest case leads. Every page has a named CTA that points to the same action.
