

# Week 1 Deliverable

Proof Statement · Sitemap · AI Workspace · Pressure Test

## 1. Proof Statement

I build practical AI research agents that actually work on real research tasks, for AI experts and research leads who need reliable automation instead of demos. My work shows how I design, test, and improve agents that handle messy real-world data and reasoning. The one action I want is for you to email me so we can discuss how I can support your research.

### Why this needs to exist

*A CV or LinkedIn only lists skills and titles. This portfolio is the only place that shows the actual agents I build, how they perform, and the thinking behind them — proof that cannot fit in a resume.*

## 2. Portfolio Sitemap

A small, focused map. Every page exists only to move one person from landing → belief → action.

| Page          | Purpose                                      | Why it earns its place                                                               |
|---------------|----------------------------------------------|--------------------------------------------------------------------------------------|
| Home / Hero   | States the claim + primary CTA               | Makes the claim clear in under 10 seconds and points to the email action             |
| Work / Agents | 2–3 case studies of real agents              | This is the actual proof — what the agent does, how it was built, results and limits |
| About         | Short background as AI-passionate researcher | Adds human credibility and explains why I focus on practical research agents         |
| Contact       | Direct email + simple form                   | Converts belief into the single most important action: email me                      |

**Design rule:** No extra pages. No blog, no services list, no generic “skills” page. Only what walks the AI expert from claim → proof → email.

## 3. AI Workspace Setup

**Workspace name:** AI Research Agents Portfolio

Create this as a Project in Claude or ChatGPT, or a Gem in Gemini.

### Custom Instructions (paste exactly)

You are my dedicated tutor and thinking partner for building a portfolio that proves one thing: I build practical AI research agents that work on real research tasks.

My proof statement is:

"I build practical AI research agents that actually work on real research tasks, for AI experts and research leads who need reliable automation instead of demos. My work shows how I design, test, and improve agents that handle messy real-world data and reasoning. The one action I want is for you to email me so we can discuss how I can support your research."

---

Always:

- Stay focused on this single claim
- Push back if I try to prove too many things
- Explain your reasoning clearly
- Act as a strict but helpful tutor
- Never write generic portfolio text – help me stay specific and true

## 4. Pressure-Test Prompt & Result

### Prompt to run inside the workspace:

This is my proof statement: I build practical AI research agents that actually work on real research tasks, for AI experts and research leads who need reliable automation instead of demos. My work shows how I design, test, and improve agents that handle messy real-world data and reasoning. The one action I want is for you to email me so we can discuss how I can support your research.

This is my sitemap:

- Home / Hero (claim + CTA)
- Work / Agents (case studies)
- About
- Contact

Does this sitemap walk my one person from landing, to believing me, to taking my one action, and does it actually prove my claim? Tell me which pages earn their place, which are wasted, and what is missing. Be specific, not encouraging.

### Key insight from the pressure test:

All four pages earn their place. The Work section is the strongest proof. One clear improvement: on the Home page, add one concrete result or agent name so the claim feels real in the first 5 seconds.

**Change I will make:** I will add one specific agent result or name on the Home hero so the claim is proven faster.

## 5. Submission Checklist

- Proof statement + the “why this needs to exist” line (included above)
- Photo of sitemap sketch (draw the 4 pages on paper or digitally and photograph it)
- Screenshot of the configured AI workspace showing: Project/Gem name, custom instructions, pressure-test prompt + AI answer
- In the Notes field on the portal: “Changed: will add one concrete agent result on the Home page after pressure test.”
- Upload public URLs under Deliverable links, screenshots/photos under Files, then hit Save submission

---

**Ready to submit.** This document contains everything required for Week 1. Use the proof statement as written, set up the AI workspace with the custom instructions, run the pressure-test prompt, take the required screenshots, and upload.

Track: AI Research Agents · Audience: AI experts & research leads · Action: Email me
